

# DICE

## Database of Incidents in Cultural Heritage

The Database of Incidents in Cultural Heritage (DICE) is a professional management tool specially made for cultural heritage organisations, like museums, archives, libraries, and owners of listed buildings. The Cultural Heritage Agency of the Netherlands provides DICE for free.

The registration of incidents helps to get a grip on what really happens in an organisation. Incident registration is an integral part of risk management.

The Cultural Heritage Agency gives the assembled outcome back to the cultural heritage field. The Agency can combine this with specific knowledge and information to help improve safety and security. On the website [www.veilig-erfgoed.nl](http://www.veilig-erfgoed.nl) we publish various articles on safety prevention for cultural heritage.

### SHARING EXPERIENCES

- Type of incidents
- Cause and consequence
- Frequency
- Damage (money & time)
- Successful preventative measures
- Lack of measures

### REGISTERED INCIDENTS

- Theft
- Burglary
- Insects & mould
- Accidents
- Vandalism
- Water
- Climatisation
